

MITSUBISHI

AnS Module Type I/O

User's Manual

Mitsubishi Programmable Controller

● SAFETY PRECAUTIONS ●

(Read these precautions before using.)

When using Mitsubishi equipment, thoroughly read this manual and the associated manuals introduced in this manual.

Also pay careful attention to safety and handle the module properly. These precautions apply only to Mitsubishi equipment. Refer to the CPU module user's manual for a description of the PC system safety precautions.

These ● SAFETY PRECAUTIONS ● classify the safety precautions into two categories: "DANGER" and "CAUTION".

 DANGER	Procedures which may lead to a dangerous condition and cause death or serious injury if not carried out properly.
 CAUTION	Procedures which may lead to a dangerous condition and cause superficial to medium injury, or physical damage only, if not carried out properly.

Depending on circumstances, procedures indicated by  CAUTION may also be linked to serious results.

In any case, it is important to follow the directions for usage.

Please save this manual to make it accessible when required and always forward it to the end user.

[DESIGN PRECAUTIONS]

DANGER

- Install a safety circuit external to the PLC that keeps the entire system safe even when there are problems with the external power supply or the PLC module. Otherwise, trouble could result from erroneous output or erroneous operation.
 - (1) Outside the PLC, construct mechanical damage preventing interlock circuits such as emergency stop, protective circuits positioning upper and lower limits switches and interlocking forward/reverse operations.
 - (2) When the PLC detects the following problems, it will stop calculation and turn off all output.
 - The power supply module has and over current protection equipment and over voltage protection equipment.
 - The PLC CPUs self diagnostic functions, such as the watchdog timer error, detect problems. In addition, all output will be turned on when there are problems that the PLC CPU cannot detect, such as in the I/O controller. Build a fail safe circuit exterior to the PC that will make sure the equipment operates safely at such times. Refer to Section 8.1 of this user's manual for example fail safe circuits.
 - (3) Output could be left on or off when there is trouble in the output module relay or transistor. So build an external monitoring circuit that will monitor any single output that could cause serious trouble.
- When overcurrent which exceeds the rating or caused by short-circuited load flows in the output module for a long time, it may cause smoke or fire. To prevent this, configure an external safety circuit, such as fuse.
- Build a circuit that turns on the external power supply when the PLC main module power is turned on. If the external power supply is turned on first, it could result in erroneous output or erroneous operation.
- When configuring a system, do not leave any slots vacant on the base. Should there be any vacant slots, always use a blank cover (A1SG60) or dummy module (A1SG62). When the extension base A1S52B, A1S55B or A1S58B is used, attach the dustproof cover supplied with the product to the module installed in slot 0. If the cover is not attached, the module's internal parts may be dispersed when a short-circuit test is performed or overcurrent/overvoltage is accidentally applied to the external I/O area.

CAUTION

- Do not bunch the control wires or communication cables with the main circuit or power wires, or install them close to each other. They should be installed 100mm (3.94inch) or more from each other. Not doing so could result in noise that would cause erroneous operation.
- When controlling items like lamp load, heater or solenoid valve using an output module, large current (approximately ten times greater than that present in normal circumstances) may flow when the output is turned OFF → ON. Take measures such as replacing the module with one having sufficient rated current.

[INSTALLATION PRECAUTIONS DANGER]

CAUTION

- Use the PLC in an environment that meets to the general specifications contained in this manual. Using the PLC in an environment outside the range of the general specifications could result in electric shock, fire, erroneous operation, and damage to or deterioration of the product.
- Install so that the pegs on the bottom of the module fit securely into the base unit peg holes and use the specified torque to tighten the module's fixing screws. Not installing the module correctly could result in erroneous operation, damage, or pieces of the product falling. Tightening the screws too far may cause damages to the screws and/or the module, resulting in fallout, short circuits, or malfunctions.
- Do not directly touch the module's conductive parts or electronic components. Doing so could cause erroneous operation or damage of the module.

[WIRING PRECAUTIONS]

DANGER

- Completely turn off the externally supplied power used in the system when installing or placing wiring. Not completely turning off all power could result in electric shock or damage to the product.
- When turning on the power supply or operating the module after installation or wiring work, be sure that the module's terminal covers are correctly attached. Not attaching the terminal cover could result in electric shock.

CAUTION

- Be sure to ground the FG terminals and LG terminals to the protective ground conductor. Not doing so could result in electric shock or erroneous operation.
- When wiring in the PLC, be sure that it is done correctly by checking the product's rated voltage and the terminal layout. Connecting a power supply that is different from the rating or incorrectly wiring the product could result in fire or damage.
- Tighten the terminal screws to with the specified torque. If the terminal screws are loosen, it could result in short circuits, fire or erroneous operation. Tightening the terminal screws too far may cause damages to the screws and /or the module, resulting in fallout, short circuits, or malfunctions.
- Be sure there are no foreign substances such as sawdust or wiring debris inside the module. Such debris could cause fires, damage, or erroneous operation.
- External connections shall be crimped or pressure welded with the specified tools, or correctly soldered. For information regarding the crimping and pressure welding tools, refer to the I/O module's user's manual. Imperfect connections could result in short circuit, fires, or erroneous operation.

[STARTUP AND MAINTENANCE PRECAUTIONS]

DANGER

- Do not touch the terminals while the power is ON.
Doing so could cause shock.
- Switch off all phases of the externally supplied power used in the system when cleaning the module or retightening the terminal or module mounting screws.
Not doing so could result in electric shock.

CAUTION

- Do not disassemble or modify the modules. Doing so could cause trouble, erroneous operation, injury, or fire.
- Use any radio communication device such as a cellular phone or a PHS phone more than 25cm (9.85 inch) away in all direction of the PLC.
Not doing so can cause a malfunction.
- Switch off all phases of the externally supplied power used in the system when mounting or removing the module.
Not doing so could result in failure or malfunction of the module.
- Do not drop or give an impact to the battery installed in the module.
Otherwise the battery will be broken, possibly causing internal leakage of electrolyte.
Do not use but dispose of the battery if it has fallen or an impact is given to it.
- Do not install/remove the terminal block more than 50 times after the first use of the product.
(IEC61131-2-compliant)
- Always make sure to touch the grounded metal to discharge the electricity charged in the electricity charged in the body, etc., before touching the module.
Failure to do say cause a failure or malfunctions of the module.

[DISPOSAL PRECAUTIONS]

CAUTION

- When disposing of this product, treat it as industrial waste

INTRODUCTION

Thank you for purchasing the MELSEC-A series PLC.

Before using the equipment, please read this manual carefully to develop full familiarity with the functions and performance of the A-series PLC you have purchased, so as to ensure correct use. Please forward a copy of this manual to the end user.

1. GENERAL SPECIFICATIONS OF INPUT AND OUTPUT MODULES AND INSTRUCTIONS FOR SELECTING THEM

MELSEC-A

1. GENERAL SPECIFICATIONS OF INPUT AND OUTPUT MODULES AND INSTRUCTIONS FOR SELECTING THEM

This chapter describes the general specifications of I/O modules and instructions for selecting them.

1.1 General Specifications

The followings are specifications common to modules being used.

General Specifications

Item	Specifications			
Operating ambient temperature	0 to 55 °C			
Storage ambient temperature	-20 to 75 °C			
Operating ambient humidity	10 to 90 % RH, no condensation			
Storage ambient humidity	10 to 90 % RH, no condensation			
Vibration resistance	Conforms to JIS B 3502 and IEC 61131-2	Intermittent vibrations		
		Frequency	Acceleration	Amplitude
		10 to 57 Hz	—	0.075 mm
		57 to 150 Hz	9.8 m/s ²	—
		Continuous vibrations		
		Frequency	Acceleration	Amplitude
		10 to 57 Hz	—	0.035 mm
		57 to 150 Hz	4.9 m/s ²	—
Shock resistance	Conforms to JIS B 3502 and IEC 61131-2 (147 m/s ² , three times each for three orthogonal directions)			
Operating ambience	No corrosive gas should be present			
Operating altitude *3	2000 m (6562ft.) or less			
Installation position	In the control panel			
Ovvovoltage category *1	II or less			
Pollution level *2	2 or less			
Dielectric withstand voltage	Between all AC external terminal and grounding: 1500VAC for 1 min. Between all DC external terminal and grounding: 500VAC for 1min.			
Noise immunity	By 1500Vp.p of AC type noise voltage, 500Vp.p of DC type noise voltage and 1 μs noise width and 25 to 60 Hz noise frequency.			
Insulation resistance	Between all AC external terminal and grounding: 500VDC, 5Ω or higher measured with insulation resistance tester.			

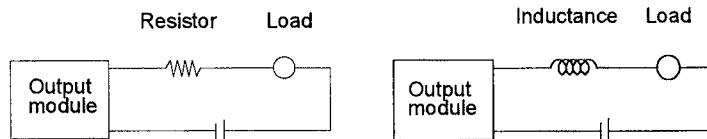

REMARK

- *1 Indicating a particular distribution board which this machine is to be connected among many boards, situated between public power supply lines and interior machine equipment. Category II is for machines receiving power supply from stationary facilities. For power rating of 300 V or less, its surge tolerance voltage is 2500 V.
- *2 Index indicating level of conductive material generation in the operating ambience. Pollution level 2 is an ambience which generates only non-conductive pollution, except for temporary conduction due to occasional condensation.
- *3 Do not use or store the PLC in the environment where the pressure is higher than the atmospheric pressure at sea level. Otherwise, malfunction may result. To use the PLC in high-pressure environment, contact your nearest Mitsubishi representative.

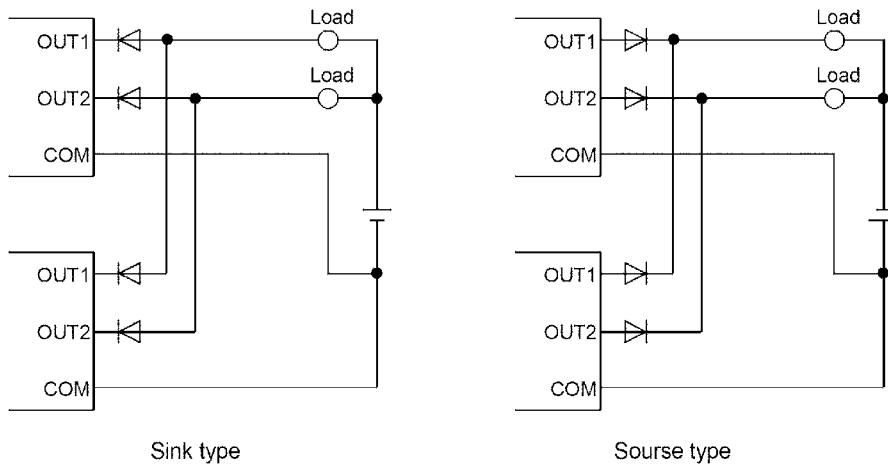

1.2 Selecting Instructions

- (1) It is recommended that a triac output module be used with a load that is frequently opened and closed or with a coil load (e.g. an electromagnet) that has a large capacity or a low power factor.
(If a contact output module is used, its service life will be shorter than specified.)
- (2) If an inductive L load is driven by an output module, it must be switched ON for 1 second or longer and switched OFF for 1 second or longer.
- (3) If a counter or timer which has a DC-DC converter as a load is used with an A1SY40, A1SY40P, A1SY41, A1SY41P, A1SY42, or A1SY42P output module, a fault may be caused in the output module due to periodic rush currents when it is turned ON or during operation.

To prevent failure due to rush current, connect a resistor or an inductance to the load in series or use an A1SY50 whose maximum load current is larger.

- (4) Connecting the transistor output modules in parallel may result in failure of the output elements.
If connecting the transistor output modules in parallel, use diodes for the circuit as shown below.

- (5) Fuses installed in output modules cannot be replaced. They are principally designed to protect external wiring if the module outputs are shorted.

Therefore, output modules may not be protected from a short circuit.

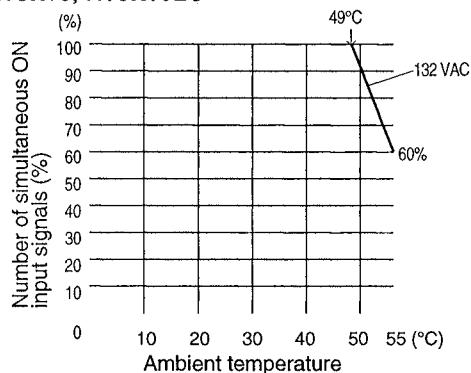

If an output module becomes faulty due to any cause other than a short circuit, its fuse may not function.

- (6) The number of signals which can be turned ON simultaneously in an input module varies according to the input voltage and ambient temperature. Select the number of the simultaneous ON signals by referring to the charts on the next page.

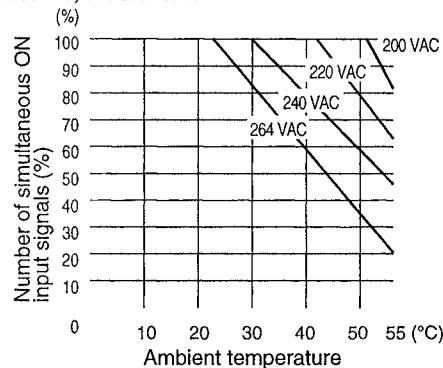

1. GENERAL SPECIFICATIONS OF INPUT AND OUTPUT MODULES AND INSTRUCTIONS FOR SELECTING THEM

MELSEC-A

- (6) The chart below shows the service life of relay output modules.

Select the appropriate modules, considering the direction given in (1).

- (a) Applicable module: A1SY10, A1SJ-56DR, A1SX48Y18

Point

- (1) When using the module for the application in which the relay contact is frequently switched, the relay life span should be considered. Therefore, it is recommended to use a triac output module.
- (2) The relay life curve shows the value based on actual use, which is not guaranteed. Therefore, make sure to allow for a margin of error. The relay life span differs according to the specifications as follows:

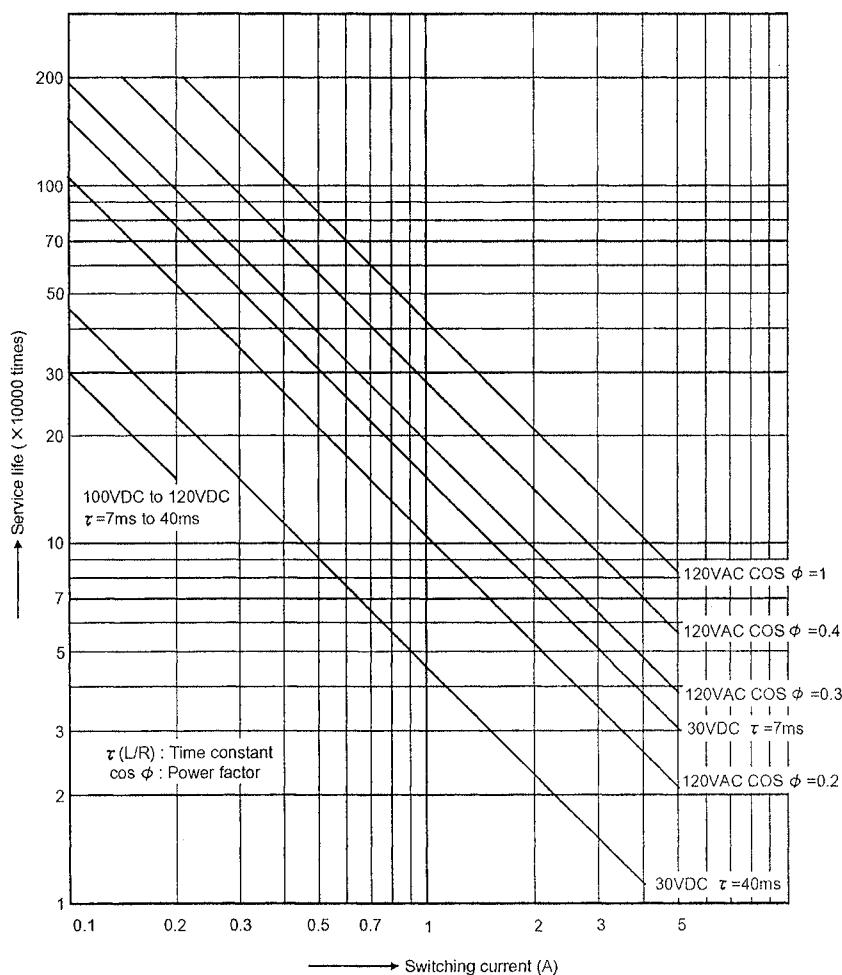

Rated switching voltage, current load	100 thousand operations
200VAC 1.5A, 240VAC 1A ($\cos \phi = 0.7$)	100 thousand operations
200VAC 1A, 240VAC 0.5A ($\cos \phi = 0.35$)	100 thousand operations
24VDC 1A, 100VDC 0.1A ($L/R=7ms$)	100 thousand operations
- (3) Relay life is substantially affected by the load type and inrush current characteristics. The inrush current may cause the contact welding. Therefore, consideration should be given to it as well as constant current.
 - (a) Inductive load
When the inductive load such as electromagnetic contactor or solenoid is shut off, high counter-electromotive force is generated between the contacting materials to produce an arc discharge. Consideration should be made especially when the power factor is low, as it may decrease the life period. In addition, make sure to consider the contact melting, as the inrush current equivalent to 5 to 15 times of constant current flows when the module is powered on.
 - (b) Lamp load
Make sure to consider the contact melting, as the inrush current equivalent to 10 to 15 times of constant current flows in the lamp circuit.
 - (c) Capacitive load
Make sure to consider the contact melting when a device such as condenser is used in a load circuit, as the inrush current equivalent to 20 to 40 times of constant current may flow in the circuit. Also, pay full attention to the wire capacity if long length of wire is routed.

MELSEC-A

- (8) The Chart below shows the service life of relay output modules.
Select the appropriate modules, considering the direction given in (1).

(a) Applicable module: A1SY10EU

Point

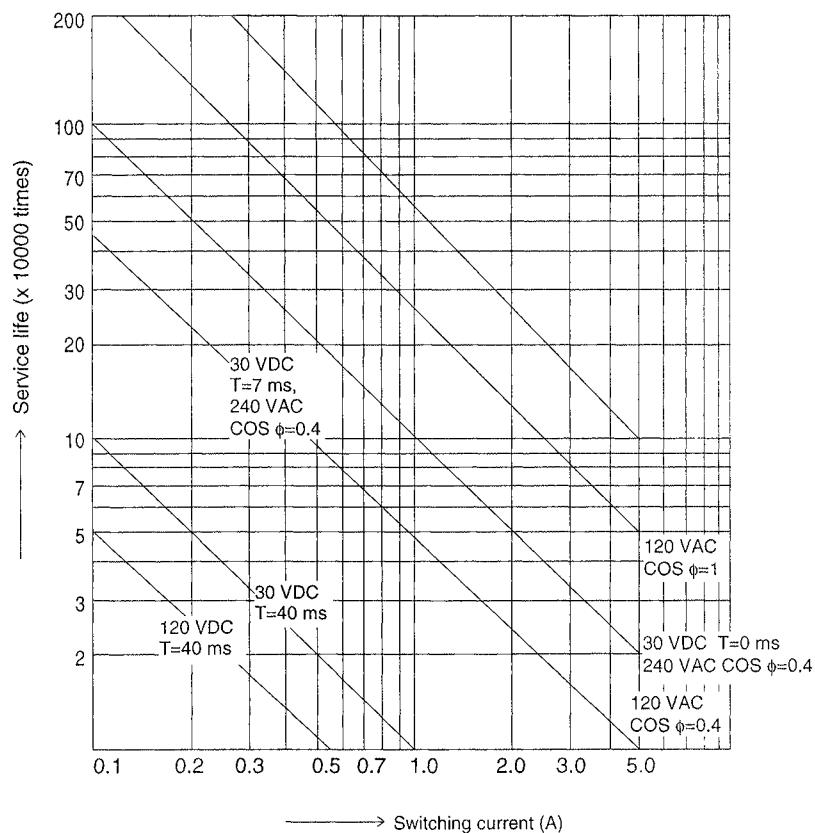

- (1) When using the module for the application in which the relay contact is frequently switched, the relay life span should be considered. Therefore, it is recommended to use a triac output module.
- (2) The relay life curve shows the value based on actual use, which is not guaranteed. Therefore, make sure to allow for a margin of error. The relay life span differs according to the specifications as follows:

Rated switching voltage, current load	200 thousand operations
100VAC 2A, 120VAC 2A ($\cos \phi=0.7$)	200 thousand operations
100VAC 2A, 120VAC 2A ($\cos \phi=0.35$)	100 thousand operations
24VDC 1.5A, 100VDC 0.1A ($L/R=7ms$)	100 thousand operations
- (3) Relay life is substantially affected by the load type and inrush current characteristics. The inrush current may cause the contact welding. Therefore, consideration should be given to it as well as constant current.
 - (a) Inductive load
When the inductive load such as electromagnetic contactor or solenoid is shut off, high counter-electromotive force is generated between the contacting materials to produce an arc discharge. Consideration should be made especially when the power factor is low, as it may decrease the life period. In addition, make sure to consider the contact melting, as the inrush current equivalent to 5 to 15 times of constant current flows when the module is powered on.
 - (b) Lamp load
Make sure to consider the contact melting, as the inrush current equivalent to 10 to 15 times of constant current flows in the lamp circuit.
 - (c) Capacitive load
Make sure to consider the contact melting when a device such as condenser is used in a load circuit, as the inrush current equivalent to 20 to 40 times of constant current may flow in the circuit. Also, pay full attention to the wire capacity if long length of wire is routed.

Make sure to consider the contact melting when a device such as condenser is used in a load circuit, as the inrush current equivalent to 20 to 40 times of constant current may flow in the circuit. Also, pay full attention to the wire capacity if long length of wire is routed.

1. GENERAL SPECIFICATIONS OF INPUT AND OUTPUT MODULES AND INSTRUCTIONS FOR SELECTING THEM

MELSEC-A

- (7) The common current of A1SY60 output module varies according to ambient temperature. Select a common current referring to the chart shown below.

A1SY60 derating curve

- (8) The A1SX41 and A1SX42 input modules and the A1SY41, A1SY41P, A1SY42 and A1SY42P output modules are supplied with soldering-type 40-pin connectors. 40-pin connectors of the pressure-displacement type and crimp contact type are also available. Tools for the pressure-displacement and crimp contact type connectors must be procured from the following suppliers:

- (a) Soldering-type 40-pin connector

Model name : A6CON1 (straight out type),
A6CON4 (straight/diagonal out type)

- (b) Crimp-contact-type 40-pin connector

Model name : A6CON2 (straight out type)
Tool : Fujitsu FCN-363T-T005/H
Applicable wire size : AWG #24 to 28

- (c) Pressure-displacement-type 40-pin connector

Model name : A6CON3 (flat cable type)
Tool : Fujitsu
FCN-367T-T012/H (locator plate)
FCN-707T-T001/H (cable cutter)
FCN-707T-T101/H (hand press)
Applicable wire size : AWG #28 (twisted)
AWG #30 (single wire)

1. GENERAL SPECIFICATIONS OF INPUT AND OUTPUT MODULES AND INSTRUCTIONS FOR SELECTING THEM

MELSEC-A

- (9) The 37-pin D sub-connector for the A1SX81 input module and A1SY81 output module is a soldering-type connector. Crimp-contact-type and pressure-displacement type 37-pin D sub-connectors are also available. Tools for the crimp-contact-type and pressure-displacement connectors must be procured by the user.

- (a) Soldering-type 37-pin D sub-connector

Model name : A6CON1E (straight out type)

- (b) Crimp-contact-type 37-pin D sub-connector

Model name : A6CON2E (straight out type)

Tool : Tyco Electronics AMP
91503-1

Applicable wire size : AWG #20 to 24

- (c) Pressure-displacement-type 37-pin D sub-connector

Model name : A6CON3E (flat cable type)

Tool : Tyco Electronics AMP
768349-1, 768338-1 (die set)
91220-1 (cable cutter)
91085-2 (hand press)

Applicable wire size : AWG #28 (twisted)
AWG #30 (single wire)

- (d) Contact for enquiries about tools for crimp-contact and pressure-displacement-type cables

(The tools cited above are only examples: for more details, enquire at the contact given below Home Page.)

<http://www.tycoelectronics.com/>

- (10) The fixing screw tightening torque should be within the following range.
Module fixing screw (M4 screw) 78.4 to 117.6N•cm

- (11) The overload protection function and overheat protection function of the following modules will be explained below.

- (a) A1SY40P, A1SY41P, A1SY42P, A1SH42P, A1SH42P-S1

Function	Description
Common (Overload and overheat protection functions)	<ul style="list-style-type: none">If an overcurrent keeps flowing due to overload, heat is generated to activate the overheat protective function.Each protection function is designed to protect the internal elements of the module, not the external equipment.
Overload protection function	<ul style="list-style-type: none">The overload protection function is activated in 1 point increments in terms of 1A to 3A/point.The overload protection function returns operation to normal when the load becomes a rated load
Overheat protection function	<ul style="list-style-type: none">The overheat protection function is activated in 1 point increments.The overheat protection function automatically returns operation to normal when heat reduces.

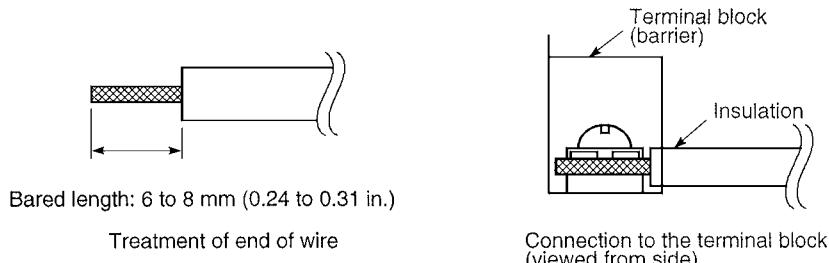

1. GENERAL SPECIFICATIONS OF INPUT AND OUTPUT MODULES AND INSTRUCTIONS FOR SELECTING THEM

MELSEC-A

- (12) Precautions for handling the I/O modules compatible with A1SX□□EU, A1SY□□EU type marked CE.
When connecting electric cable to the terminal block without using solderless terminals.

- (a) Bare the end of insulated wires to expose about 6 to 8 mm of naked wire.

When making connections, ensure that bared wire does not project from the terminal block. If it does, it may close the gap to a distance shorter than that required for insulation between the terminals

- (b) If twisted wire is used, make sure that it does not unravel.

- (13) When the terminal block cover cannot be closed due to wire gauge treatment, etc., replace the terminal block cover with the following product. This protects the charging section.

Type: A1STEC-S

Applicable module

	Type
Input module	A1SX10, A1SX20, A1SX30, A1SX40(S1/S2), A1SX80(S1/S2)
Output module	A1SY10, A1SY18A, A1SY22, A1SY28A, A1SY40, A1SY41P, A1SY50, A1SY60(E), A1SY68A, A1SY80, A1SY81EP
Input/output composite module	A1SX48Y18, A1SX48Y58
Special function module	A1SI61, A1S64AD, A1S62DA, A1S63ADA, A1S62RD3/4, A1SD61, A1SP60

- (14) Precaution when Connecting the Uninterruptive Power Supply (UPS)
Use a UPS which employs the constant inverter power supply method with 5 % or less voltage fluctuation.
Do not use a UPS with the constant commercial power supply method.

2. INPUT MODULE SPECIFICATIONS

2.1 A1SX10 AC Input Module

Model		AC Input Module		Appearance	
Specifications		A1SX10			
Number of input points		16 points			
Isolation method		Photocoupler			
Rated input voltage		100 to 120 VAC 50/60 Hz			
Input voltage distortion factor		5% or less (See section 1.2 (13))			
Rated input current		Approx. 6 mA (100 VAC 60 Hz)			
Operating voltage range		85 to 132 VAC (50/60 Hz ±5%)			
Max. simultaneous input points		100% simultaneously ON (at 110 VAC) 60% simultaneously ON (at 132 VAC)			
Inrush current		Max. 200 mA, within 1 ms (132 VAC)			
ON voltage/ON current		80 VAC or higher/5 mA or higher			
OFF voltage/OFF current		30 VAC or lower/1.4 mA or lower			
Input impedance		Approx. 18 kΩ (60 Hz), Approx. 21 kΩ (50 Hz)			
Response time	OFF → ON	20 ms or less (100 VAC 60 Hz)			
	ON → OFF	35 ms or less (100 VAC 60 Hz)			
Common terminal arrangement		16 points/common (common terminals: TB9, TB18)			
Operating indicator		ON state is indicated (LEDs)			
External connections		20-point terminal block connector (M3.5 x 7 screws)			
Applicable wire size		0.75 to 1.25 mm ² (AWG16 to AWG19) (Applicable tightening torque 78.4 N·cm)			
Applicable solderless terminals		R1.25-3.5, R2-3 RAV1.25-3.5, RAV2-3.5			
Accessories		None			
Internal current consumption (5 VDC)		50 mA (TYP, all points ON)			
Weight kg		0.21

Front view

*1: In the pin number column, the pins beginning with "1[][]" are left connector pins and those beginning with "2[][]" are right connector pins.

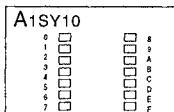

*2: When the switch is set to the left side position, the status of the first-half devices (X00 to X1F) is displayed by the LEDs. When it is set to the right side, the status of the second-half devices (X20 to X3F) is displayed by the LEDs.

Weight kg		0.24		
External Connections				
<p>The diagram illustrates the internal circuitry of the A1SY22 module. It features four triac output channels, each consisting of a triac switch, a surge absorber, and a photocoupler driver. The common terminal for all outputs is connected to ground. External connections are made via a 20-point terminal block (TB1-TB20). Terminals TB1, TB6, TB11, and TB16 are connected to the common ground rail. Terminals TB2, TB3, TB8, TB12, TB13, TB14, TB15, TB17, TB18, TB19, and TB20 are connected to the external load. Terminals TB4, TB5, TB7, and TB9 are connected to the 100/200V AC power source. Terminals TB10 and TB20 also serve as COM1 and COM2 respectively. LED indicators are present on the module's faceplate.</p>

*1 : The fuse in the output module is provided to prevent the external wiring from burning in the event of a short in the module's output. Therefore, it may not be able to protect output devices.

If an output device is damaged in a failure mode other than a short circuit, the fuse might not blow.

*2 : The ERR. indicating LED will also light when the external power supply is shut OFF.

Number of output points	8 points (number of occupied I/O points : 16 points)		
Insulation method	Photocoupler		
Rated load voltage	100 to 240 VAC 50/60 Hz ±3 Hz		
Max. load voltage	264 VAC		
Max. load current	0.6A/point, 2.4A/common (49°C), 1.9A/common (55°C)		
Min. load voltage/current	24 VAC 15 mA, 120 VAC 15 mA, 240 VAC 15 mA		
Max. input current	30 A 10 ms or less, 15 A 100 ms or less		
Leakage current at OFF circuit	1.5 mA (240 VAC 60 Hz)		
Max. voltage drop at ON circuit	1.5 VAC or less (15mA to 1 A)		
Response time	OFF → ON 1 ms or less ON → OFF 1 ms + 0.5 cycles or less		
Surge absorber	Built-in CR absorber (0.1 μF + 47 Ω)		
Fuse rating	None		
Common terminal arrangement	4 points/common (common terminals: TB8, TB16)		
Operating indicator	ON state is indicated (LEDs)		
External connections	20-point terminal block connector (M3.5 × 7 screws)		
Applicable wire size	0.75 to 1.25 mm ² (AWG16 to AWG19) (Applicable tightening torque 78.4 N·cm)		
Applicable crimp terminals	RAV1.25-3.5		
Accessories	None		
Insulation withstand voltage	2830VAC rms/3 cycle (altitude 2,000 m)		
Insulation resistor	10 MΩ or higher at insulation resistance tester		
Noise immunity	IEC801-4:1 kV		
Internal current consumption (5 VDC)	270 mA (TYP, all points ON)		
Weight kg	0.24		

External Connections

*1 : The fuse in the output module is provided to prevent the external wiring from burning in the event of a short in the module's output. Therefore, it may not be able to protect output devices.
If an output device is damaged in a failure mode other than a short circuit, the fuse might not blow.
*2 : The ERR. indicating LED will also light when the external power supply is shut OFF.

Weight kg	0.13		
External Connections			
<p>The diagram illustrates the internal logic of the A1SY40P module. It features four sets of driver stages, each consisting of a driver IC, a diode, and a transistor. These stages are connected to a common-emitter configuration. The outputs of these stages are connected to a constant voltage circuit, which provides a fixed voltage level. The outputs of the constant voltage circuit are then connected to the external load through terminal blocks TB1, TB8, TB9, TB10, TB11, TB18, TB19, and TB20. The module also includes two LED indicators and a common terminal block (TB10, TB20).</p>

*1 : In the pin number column, the pins beginning with "1[][]" are left connector pins and those beginning with "2[][]" are right connector pins.

*2 : When the switch is set to the left side position, the status of the first-half devices (Y00 to Y1F) is displayed by the LEDs.
When it is set to the right side, the status of the second-half devices (Y20 to Y3F) is displayed by the LEDs.

Model Specifications	Transistor Output Module (Sink Type)		Appearance
	A1SY50		
Number of output points	16 points		
Isolation method	Photocoupler		
Rated load voltage	12/24 VDC		
Operating voltage range	10.2 to 30 VDC (peak voltage 30 VDC)		
Max. load current	0.5 A/point, 2 A/common		
Max. allowed rush current	4 A 10 ms or less		
Leakage current at OFF circuit	0.1 mA or less		
Max. voltage drop at ON circuit	0.9 VDC (TYP) 0.5 A, 1.5 VDC (MAX) 0.5 A		
Response time	OFF → ON	2 ms or less	
	ON → OFF	2 ms or less (resistive load)	
Surge absorber	Zener diode		
Fuse rating	Fuse 3.2 A (1 piece/common), not replaceable *1		
Fuse capacity	50 A		
Error display	LED goes ON when fuse blows: signal output to PC CPU *2		
Common terminal arrangement	8 points/common (common terminals: TB10, TB20)		
Operating indicator	ON state is indicated (LEDs)		
External connections	20-point terminal block connector (M3.5 x 7 screws)		
Applicable wire size	0.75 to 1.25 mm ² (AWG16 to AWG19) (Applicable tightening torque 78.4 N·cm)		
Applicable solderless terminals	R1.25-3.5 R2-3.5 RAV1.25-3.5 RAV2-3.5		
Accessories	None		
External power supply	Voltage	12/24 VDC (10.2 to 30 VDC)	
	Current	60 mA (TYP 24 VDC/common)	
Internal current consumption (5 VDC)	120 mA (TYP, all points ON)		
Weight kg	0.2		
External Connections			
<p>The diagram illustrates the internal circuitry of the A1SY50 module. It features a central logic section with 16 individual output channels. Each channel consists of a driver transistor (NPN) connected to a common-emitter configuration. The base of each driver is controlled by a photocoupler. The photocoupler's output is connected to the base of the driver via a resistor. The collector of each driver is connected to a common-emitter connection point (TB1, TB8, TB9, TB10, TB11, TB18, TB19, TB20). The emitters of the drivers are connected to a common ground rail. A fuse (3.2A) is placed in series with the positive power supply line (12/24V DC) before it enters the module. The negative power supply line (12/24V DC) is connected to the common ground rail. External connection points are labeled TB1 through TB20, corresponding to the connection points on the right side of the module.</p>			
Terminal No.	Signal Name

*1 : In the pin number column, the pins beginning with "1[][]" are left connector pins and those beginning with "2[][]" are right connector pins.

*2 : When the switch is set to the left side position, the status of the first-half devices (Y00 to Y1F) is displayed by the LEDs. When it is set to the right side, the status of the second-half devices (Y20 to Y3F) is displayed by the LEDs.

*3 : The fuse in the output module is provided to prevent the external wiring from burning in the event of a short in the module's output. Therefore, it may not be able to protect output devices.
If an output device is damaged in a failure mode other than a short circuit, the fuse might not blow.

*4 : The ERR. indicating LED will also light when the external power supply is shut OFF.

4. INPUT/OUTPUT COMPOSITE MODULE SPECIFICATIONS

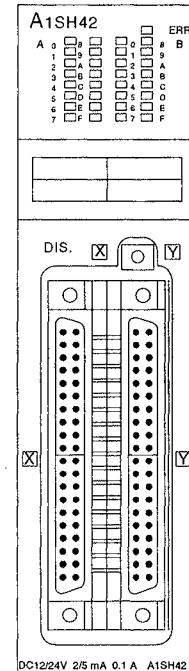

MELSEC-A

(1) Number of occupied I/O points setting

The Number of occupied I/O points is set by the DIP switches on the front face of the module. It is factory-set to 64 points.

Number of occupied I/O points	16 points	32 points	48 points	64 points
Switch setting	<p>SW 1 2 ON</p>	<p>SW 1 2 ON</p>	<p>SW 1 2 ON</p>	<p>SW 1 2 ON</p>

(2) Dynamic scan method

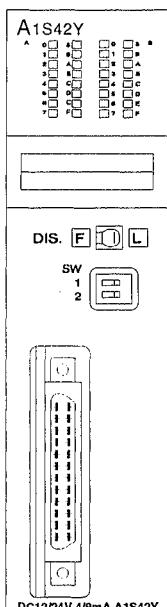

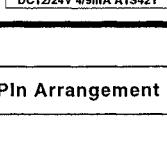

In the dynamic scan method, the whole number of occupied I/O points is divided into several groups of a specified number of points, and processed in several scans. 64 input points are divided into 8 groups of 8 points, and processed group by group as shown in the figure below. Regardless of whether the number of occupied I/O points is set at 16, 32, or 48 points, the dynamic scan cycle is fixed at 13.3 ms.

Accessories		Connector (1 pce.) for external wiring (soldering type)			
External power supply	Voltage	12/24 VDC (10.2 to 26.4 VDC)			
	Current	55 mA (TYP, 24 VDC/common)			
Internal current consumption (5 VDC)		180 mA (TYP, all points ON)			
Weight kg		0.19			

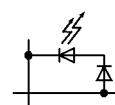

*1 The fuse in the output module is provided to prevent the external wiring from burning in the event of a short in the module's output. Therefore, it may not be able to protect output devices. If an output device is damaged in a failure mode other than a short circuit, the fuse might not blow.

*2 The ERR. indicating LED will also light when the external power supply is shut OFF.

*3 Install the resistance for restricting LED current outside the A1S42Y module.

*4 The power supply voltage(24/12 VDC) is applied to the reverse direction of the LED. If the opposite voltage resistance is not sufficient, connect a diode for serial protection to each LED.

4. INPUT/OUTPUT COMPOSITE MODULE SPECIFICATIONS

POINT

- (1) The number of connectable I/O points is 32 for all connector/terminal block convertor modules.
Two connector/terminal block convertor modules and two cables for connector/terminal block convertor modules are required for 64-point I/O modules.
- (2) Though the A1SX81(S2) is used either as a sink or source type, use the A6TBX36-E, A6TBX54-E or A6TBX70-E.
The A6TBXY36, A6TBXY54 or A6TBX70 cannot be used.
- (3) Though the A1SX82-S1 is used either as a sink or source type, the A6TBXY36/XY54/X70 may be used only when the A1SX82-S1 is used as a sink type.
When it is used as a source type, the A6TBXY36/XY54/X70 cannot be used.
- (4) Though the A1SY82 is a source type output module, use the A6TBXY36 or A6TBXY54. The A6TBY36-E, A6TBY54-E cannot be used.
- (5) In the A series, the plus common input module is separately labeled as a sink type input module, and the minus common input module is separately labeled as a source type input module.
- (6) When using the A6TBXY70 as a mixed input/output module, use at the input side.
- (7) Tighten the module terminal screws to the following torque.
Supply line connecting terminal screw (M3.5 screw): Tightening torque 78.4N•cm

6. BLANK COVER, DUMMY MODULE SPECIFICATIONS

6.1 Blank Cover (A1SG60), Dummy Module (A1SG62) Specifications

The A1SG60 blank cover is used to protect base unit vacant slots against dust etc.

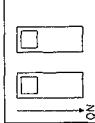

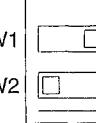

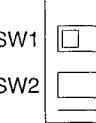

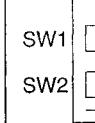

The A1SG62 dummy module is used to reserve a specified number of I/O points at any base unit slot.

Table 6.1 Dummy Module, Blank Cover Specifications

Model Item	A1SG60	A1SG62
Occupied I/O points	16 points	Max. 64 (16, 32, 48, or 64 points can be selected by using a select switch on the front of the module.)
I/O allocation specification	Empty [] points 0, 16, 32, 48, or 64 points can be specified to [].	[] input (X) points Designate the number of points set with the select switch in the [].
Purpose	Used as a dust preventive cover for an unused slot where no input/output module is installed (e.g., a vacant slot between modules).	A module used to reserve 16, 32, 48, or 64 points for an I/O module to be installed in the future.
Other functions	—	Equipped with simulation switches for 16 points beginning with the head I/O number: inputs can be turned ON/OFF without using any external switch.
Internal current consumption (5 VDC)	—	60 mA
Outside dimensions (mm)(in)	130(H) x 34.5(W) x 93.6 (D) (5.12 x 1.36 x 3.69)	130(H) x 34.5(W) x 93.6 (D) (5.12 x 1.36 x 3.69)
Weight (kg)	0.08	0.13

6.2 Setting the Occupying Number of Inputs/Outputs for A1SG62

Set the switches for setting the occupying number inputs/outputs (DIP switches) on the front of the module. The factory setting is 16 points.

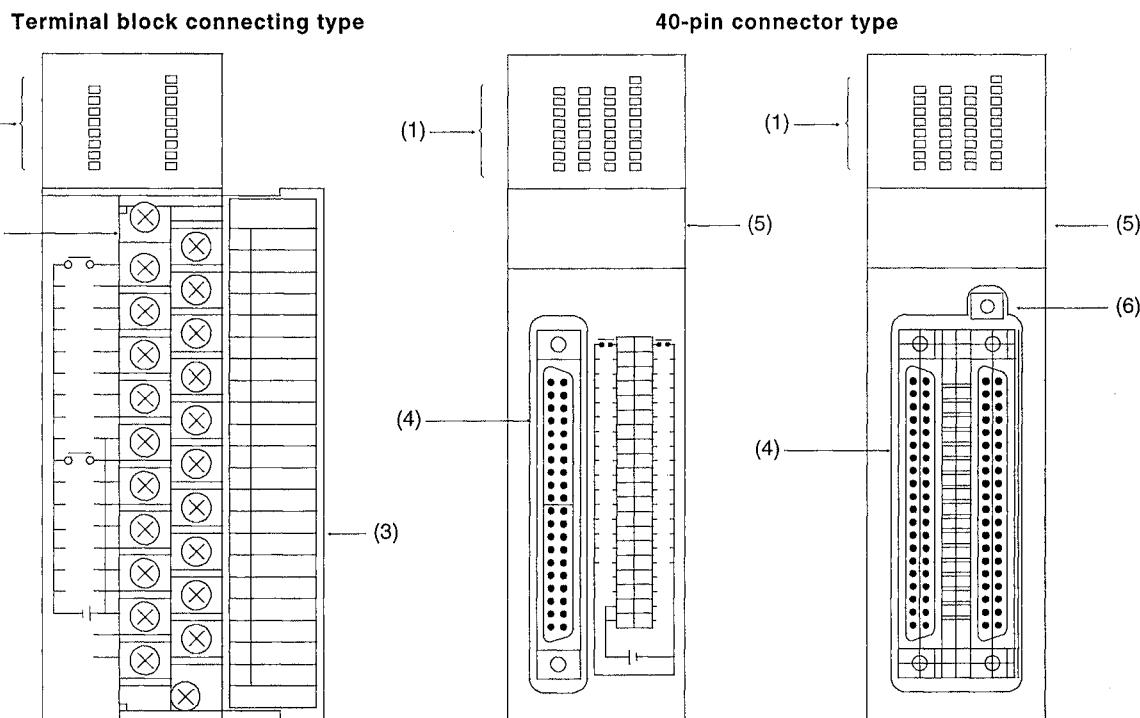

Occupying number of inputs/outputs	16 points	32 points	48 points	64 points
Switch settings	SW1 	SW1 	SW1 	SW1 

7. NAMES OF PARTS AND SETTINGS

MELSEC-A

7. NAMES OF PARTS AND SETTINGS

The figures and table below show the names of the parts of I/O modules.

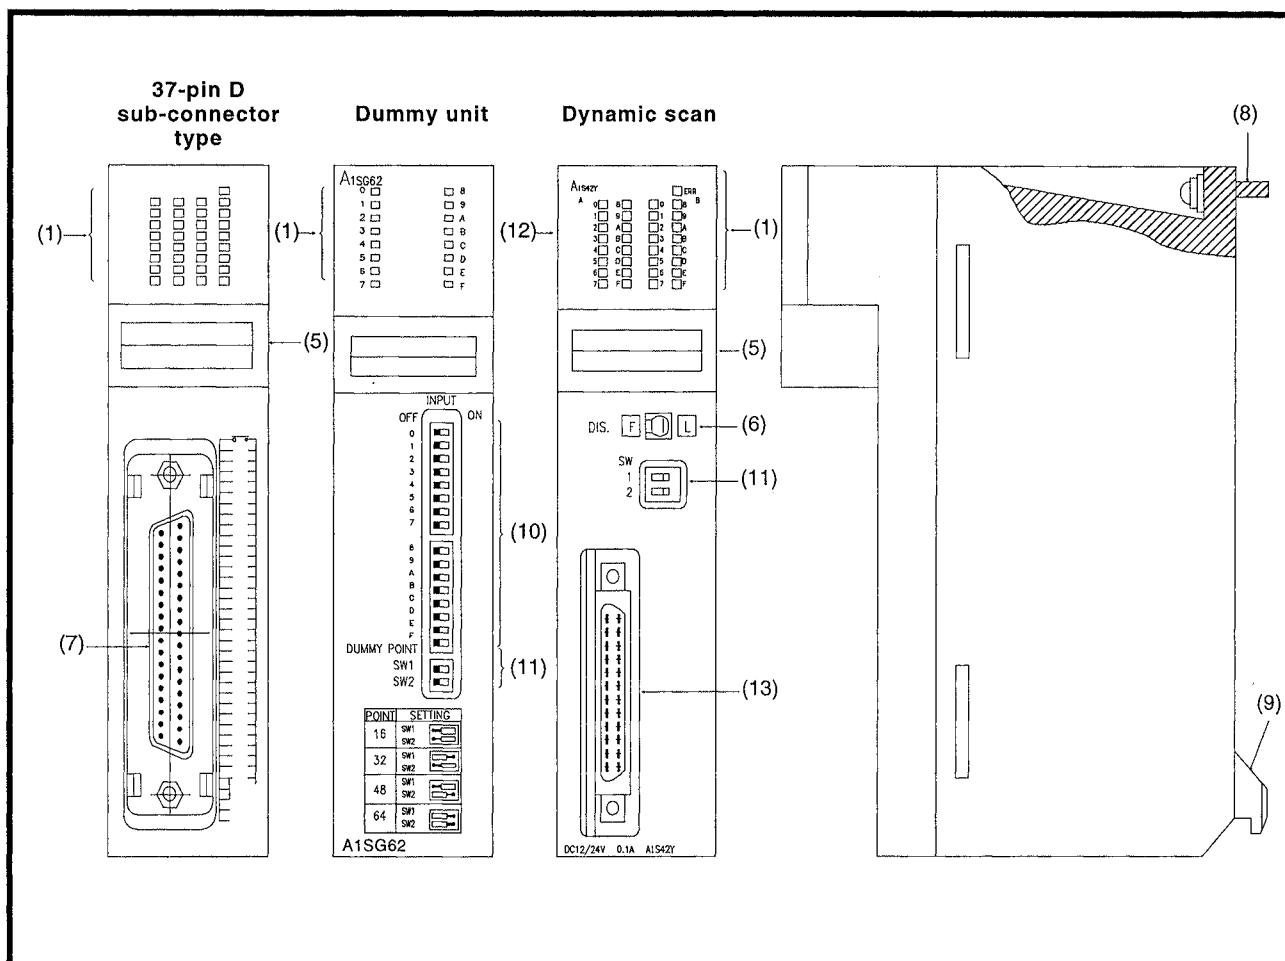

No.	Name	Description
(1)	I/O indicator LED	Indicates the ON/OFF state of input and output. Indicates the ON state when it is lit.
(2)	Terminal block	Used to connect a power cable and I/O cables. (M3.5 screw)
(3)	Terminal cover	Covers the terminals. Terminal symbols can be written on the card attached to the inside of the cover.
(4)	40-pin connector	For 32-I/O and 64-I/O modules. Used to connect a power cable and I/O cables.
(5)	Symbol card cover	Symbol card cover
(6)	Indicator select switch	Used to switch the LED indication for the first-half 32 I/Os or for the second-half 32 I/Os of a 64-I/O module.
(7)	37-pin D sub connector	For 32-I/O and 64-I/O modules. Used to connect a power cable and I/O signal cables.
(8)	Module mounting screw	Used to fix the module to the base unit.
(9)	Module mounting hook	Engages with the mounting hole in the base unit to secure the module.

REMARK

When removing the terminal symbol card, lift up the edge of the card a little to pull it out of the terminal cover smoothly.

(4)	Module fixing hooks	Hooks for mounting on a DIN rail

8. I/O CONNECTION TROUBLESHOOTING

This section explains possible problems with I/O circuits.

8.1 Input Circuit Troubleshooting

This section describes possible problems with input circuits, and corrective action.

Table 8.1 Input Circuit Problems and Corrective Action

	Condition	Cause	Corrective Action
Example 1	Input signal does not turn OFF.	<ul style="list-style-type: none"> Leakage current of input switch (e.g. drive by non-contact switch). 	<ul style="list-style-type: none"> Connect an appropriate resistor which will make the voltage across the terminals of the input module lower than the OFF voltage value.  <p>It is recommended to use 0.1 to 0.47 μF + 47 to 120 Ω (1/2 W) for the CR constant.</p>
Example 2	Input signal does not turn OFF.	<ul style="list-style-type: none"> Drive by a limit switch with neon lamp. 	<ul style="list-style-type: none"> Same as Example 1. Or make up another independent display circuit.
Example 3	Input signal does not turn OFF.	<ul style="list-style-type: none"> Leakage current due to line capacity of wiring cable. (Line capacity C of twisted pair wire is approx. 100 PF/m). 	<ul style="list-style-type: none"> Same as Example 1. However, leakage current is not generated when the power supply is located in the input equipment side as shown below. 
Example 4	Input signal does not turn OFF.	<ul style="list-style-type: none"> Drive by switch with LED indicator. 	<ul style="list-style-type: none"> Connect an appropriate resistor as shown below so that the current flowing along the input module becomes lower than OFF current.  <p>* An example calculation of a value for a connected resistor is given on the following page.</p>

Table 8.1 Input Circuit Problems and Corrective Action (Continued)

	Condition	Cause	Corrective Action
Example 5	Input signal does not turn OFF.	<ul style="list-style-type: none"> Sneak path due to the use of two power supplies. 	<ul style="list-style-type: none"> Use only one power supply. Connect a sneak path prevention diode. (Figure below) 

<Sample calculation for Example 4>

When a switch with LED indicator, giving leakage current of 3mA at maximum when 24VDC power is supplied to the A1SX40

- (1) 1.7mA or less OFF current of the A1SX40 is not satisfied. Hence, connect a resistor as shown below.

- (2) Calculate the resistance value R as shown below.

To satisfy 1.7mA or less OFF current of the A1SX40, connect a resistor which flows 0.63mA or more.

$$I_R: I_Z = Z \text{ (Input impedance)}: R$$

$$R \leq \frac{I_Z}{I_R} \times Z \text{ (Input impedance)} = \frac{1.0}{2.0} \times 3.3 = 1.65[\text{k}\Omega]$$

Supposing that the resistance R is 1.5kΩ, the power capacity W of resistor R is:
 $W = (\text{Input voltage})^2 \div R = 26.4^2 \div 1500 = 0.465 (\text{W})$

- (3) Connect a resistor of 1.5 (kΩ) and 2 to 3 (W) to a terminal which may cause an error, since the power capacity of a resistor is selected so that it will be 3 to 5 times greater than the actual power consumption.

- (4) Also, OFF voltage when resistor R is connected will be as follows.

$$\frac{1}{\frac{1}{1.5[\text{k}\Omega]} + \frac{1}{3.3[\text{k}\Omega]}} \times 3[\text{mA}] = 3.09[\text{V}]$$

This satisfies 6V or less OFF voltage of A1SX40.

8.2 Output Circuit Failures and Corrective Action

This section describes possible problems with output circuits, and corrective action.

Table 8.2 Output Circuit Failures and Corrective Action

	Condition	Cause	Corrective Action
Example 1	When the output is OFF, excessive voltage is applied to the load.	<ul style="list-style-type: none"> Load is half-wave rectified inside (in some cases, this is true of a solenoid). <p>If a resistor is used in this way, it does not pose a problem to the output element. But it may cause the diode, which is built into the load, to deteriorate, resulting in a fire, etc.</p>	<ul style="list-style-type: none"> Connect a resistor several tens to hundreds of kΩ across the load.
Example 2	The load does not turn OFF (triac output).	<ul style="list-style-type: none"> Leakage current due to built-in noise suppression <p>When the wiring distance from the output module to the load is long, there may be a leakage current due to the line capacity.</p>	<ul style="list-style-type: none"> Connect the resistors to both ends of the load.
Example 3	When the load is a CR type timer, time constant fluctuates (triac output).	<ul style="list-style-type: none"> Leakage current due to built-in noise suppression <p>When the wiring distance from the output module to the load is long, there may be a leakage current due to the line capacity.</p>	<ul style="list-style-type: none"> Connect the resistors to both ends of the CR timer. <p>Calculate the CR constant depending on the load.</p>

Table 8.2 Output Circuit Failures and Corrective Action (Continued)

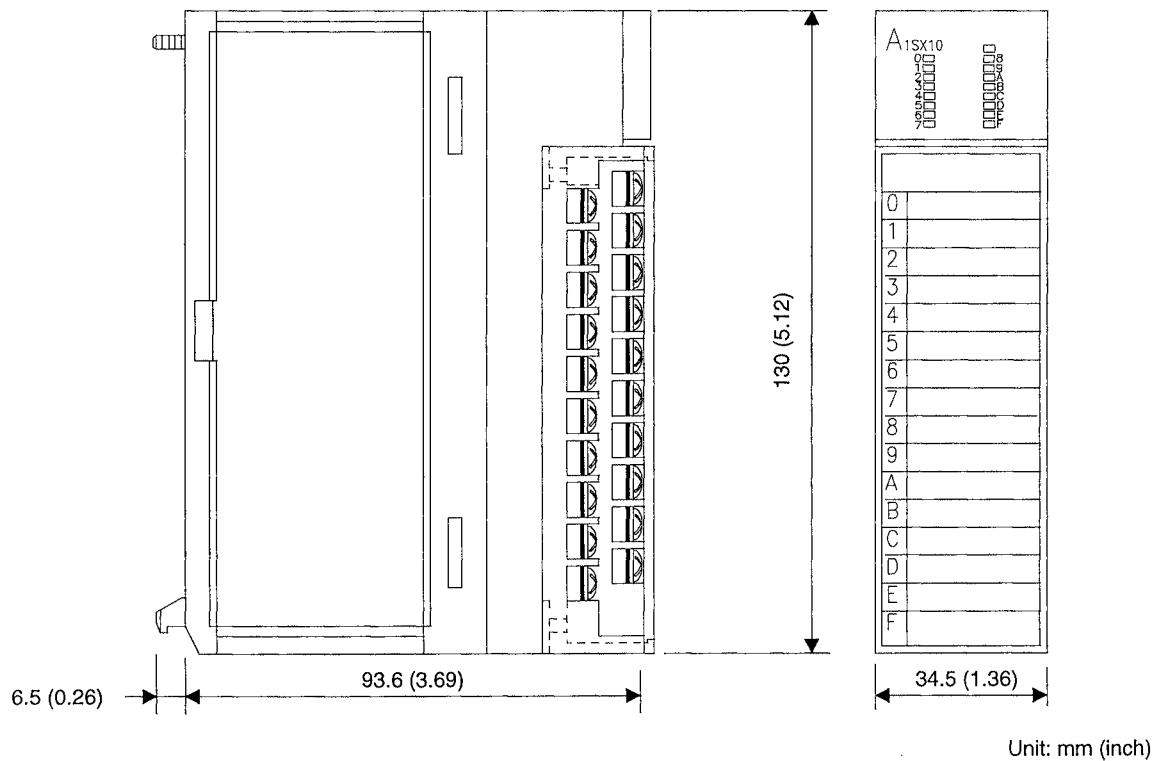

Condition	Cause	Corrective Action
Example 4 When the external power supply turns on, the load turns on for a moment.	<p>Erroneous output due to the stray capacitance (C) between collector and emitter of photocoupler.</p> <p>There is no erroneous output at normal load. An erroneous output may occur at high sensitivity load (such as solid state relay).</p> <p>Output module, Combined module</p> <p>If the external power supply is turned on precipitously, I_C current flows due to the stray capacitance (C) between collector and emitter of photocoupler</p> <p>I_C current flows to the next stage of transistor Tr1 gate and Y0 output turns on by 100 μs.</p> <p>SW: External power supply (24V) at On</p> <p>Output Y0</p>	<p>When the external power supply turns ON/OFF, check that the external power supply rising edge must be 10ms or more, and switch the SW1 to the primary side of external power supply.</p> <p>When switching to the secondary side of the external power supply is required, the external power supply rising edge connected a condenser must be slow, and measured 10ms or more.</p> <p>R1: Several tens of ohms</p> <p>Power capacity \geq (external power supply current^{*1})² \times resistance value \times (3 to 5)^{*2}</p> <p>C1: several hundreds of microfarads 50V</p> <p>*1 Refer to consumption current of the external power supply for modules used in this manual.</p> <p>*2 Select the power capacity of resistance to be 3 to 5 times larger than the actual power consumption.</p> <p>(Example)</p> <p>$R1=40 \Omega, C1=300 \mu F$</p> <p>Use the below expression to calculate a time constant</p> $C1 \times R1 = 300 \times 10^{-6} \times 40$ $= 12 \times 10^{-3} \text{ s}$ $= 12 \text{ ms}$

APPENDICES

APPENDIX 1 OUTSIDE DIMENSIONS

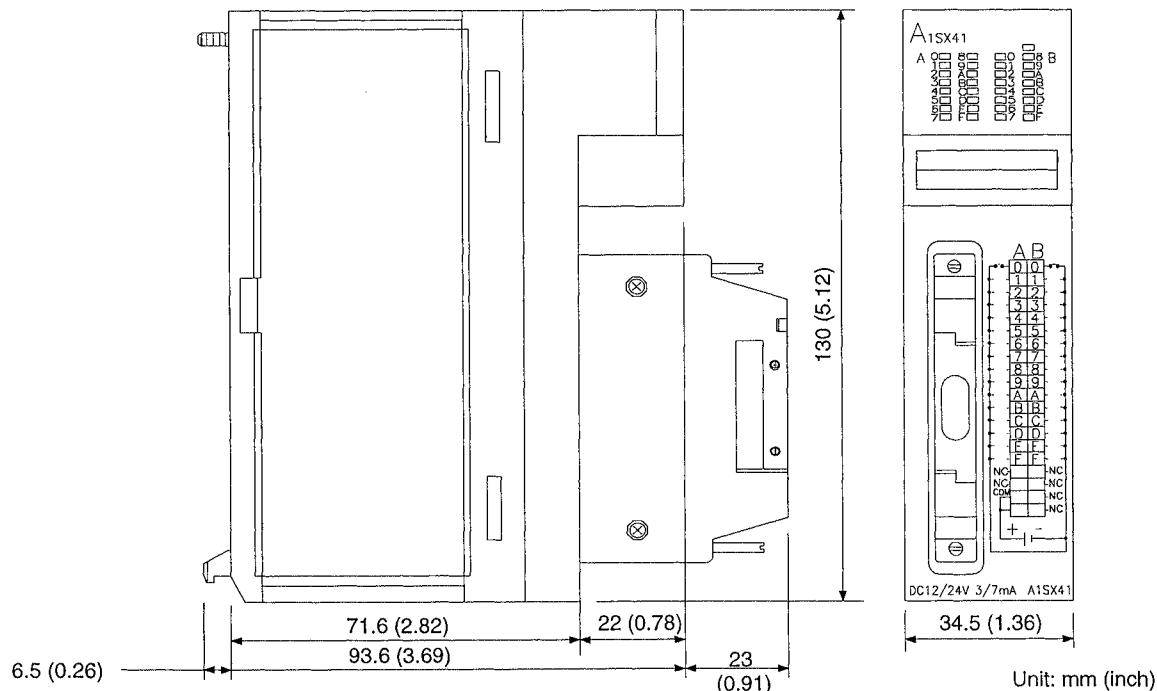

1.1 Input/Output Modules

1.1.1 Terminal base connecting type

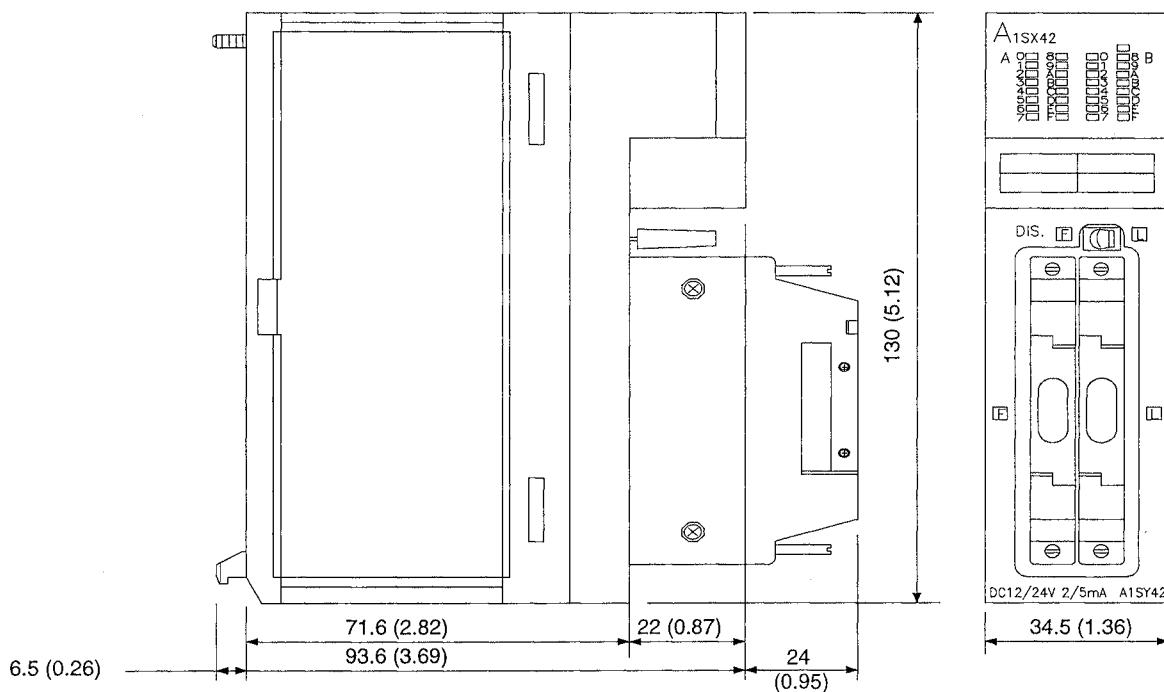

1.1.2 40-pin connector type

(1) 32-input/output module

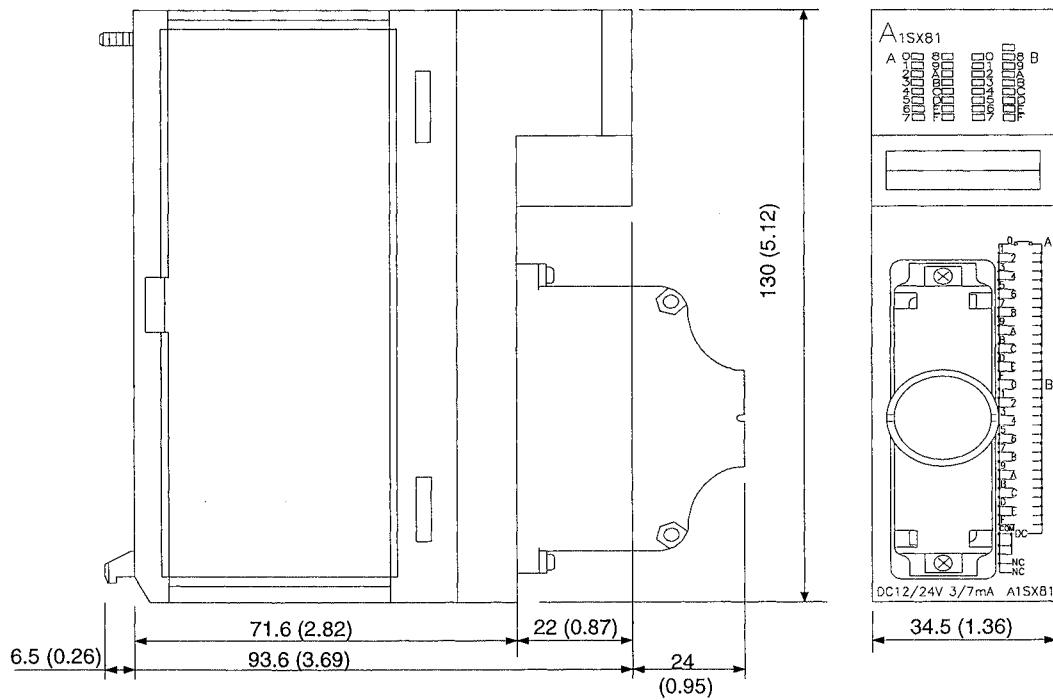

(2) 64-input/output module

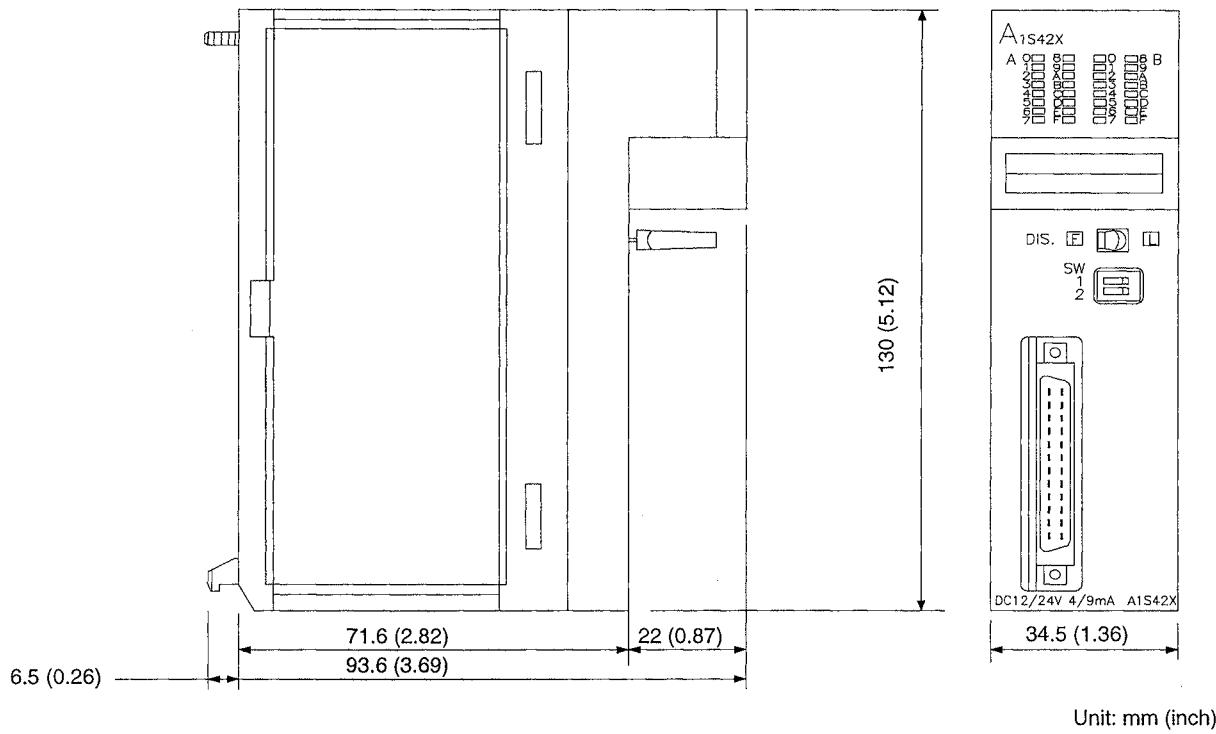

Unit: mm (inch)

1.1.3 37-pin D sub-connector type 32-input/output module

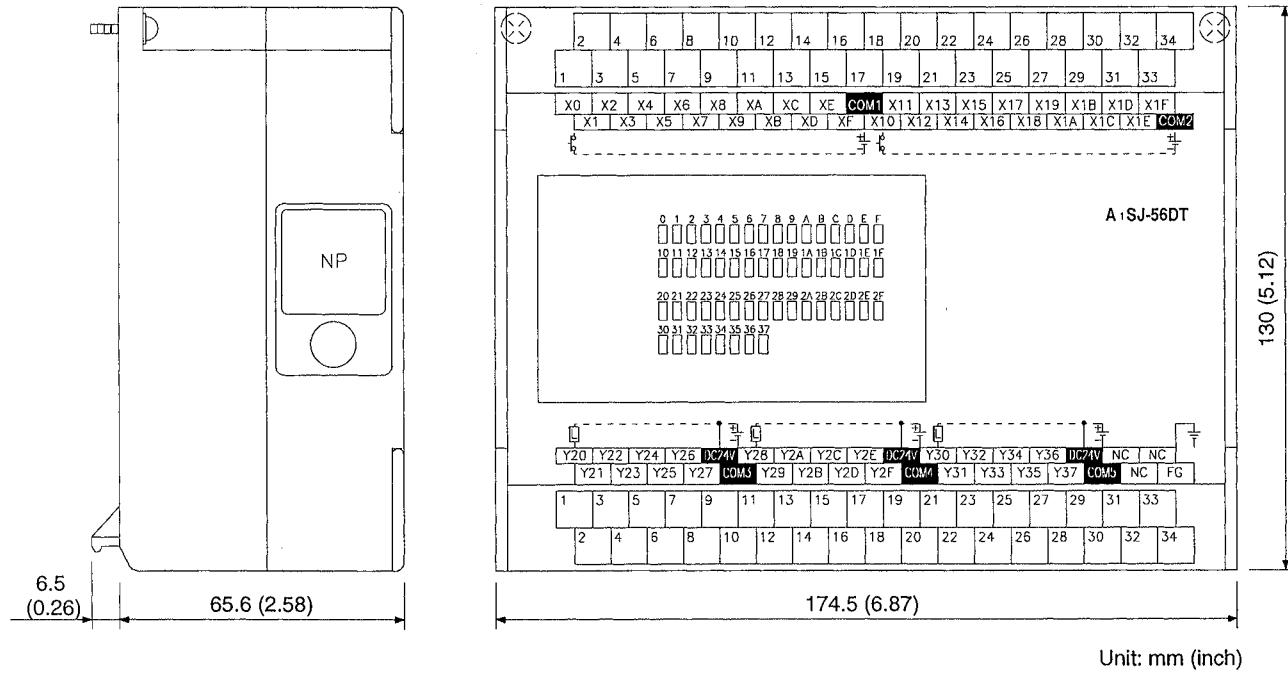

Unit: mm (inch)

1.2 Dynamic I/O Module

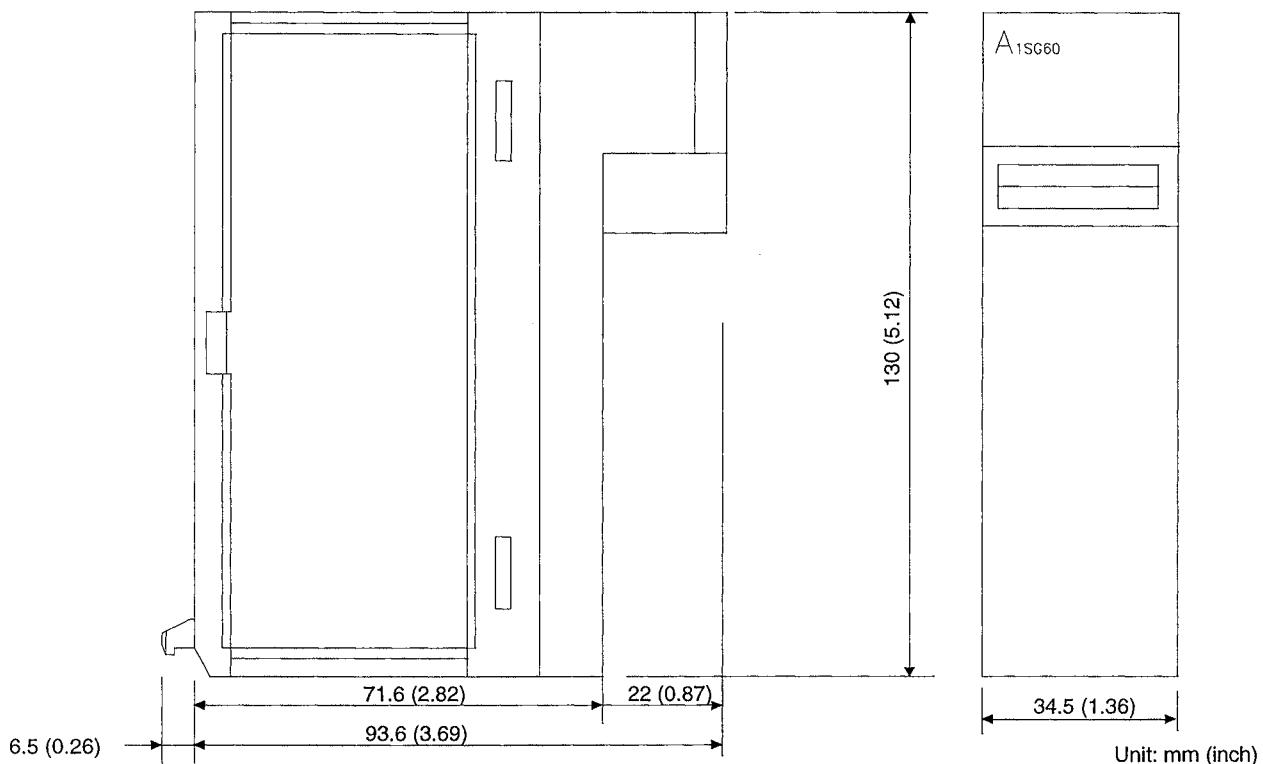

1.3 A1SJ-56[] Input/Output Combination Module

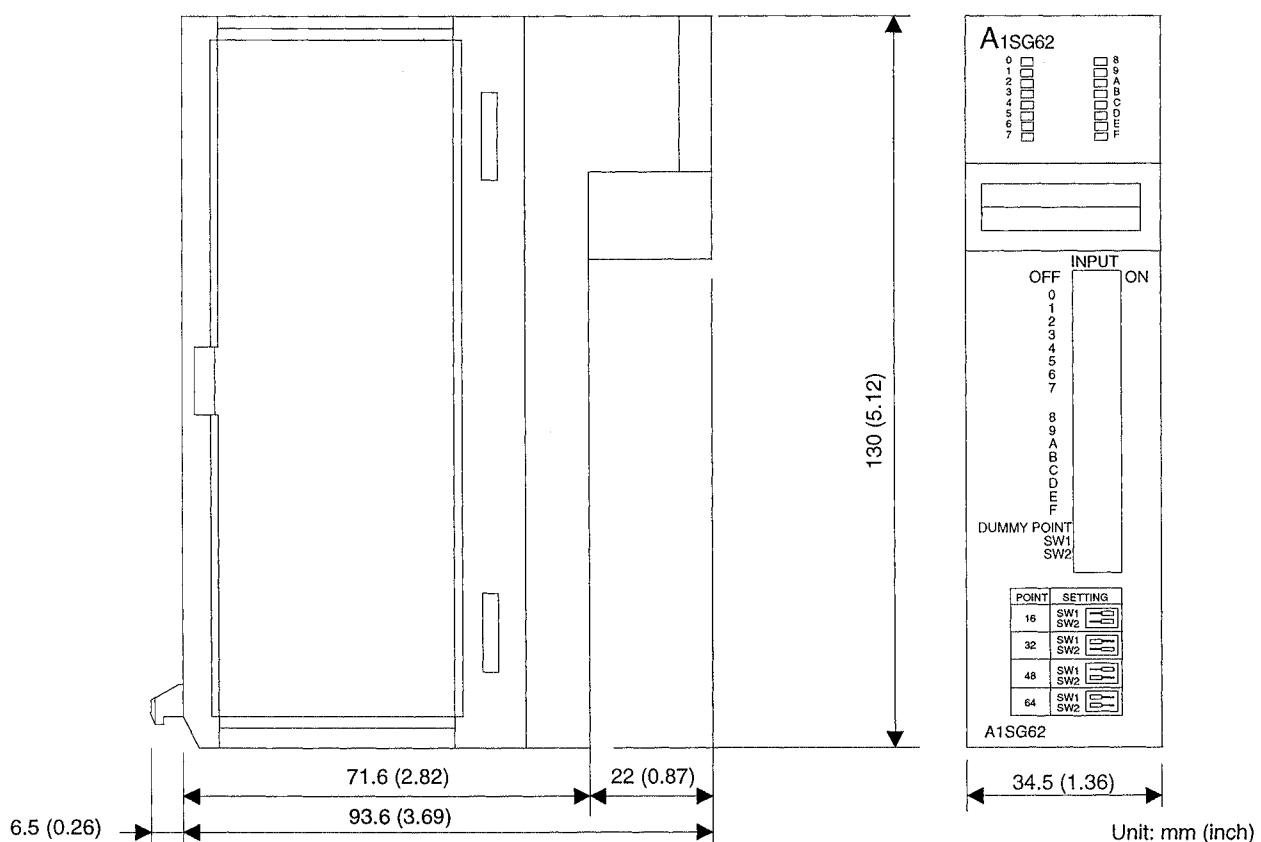

1.4 Dummy Module, Blank Cover

1.4.1 A1SG60 blank cover

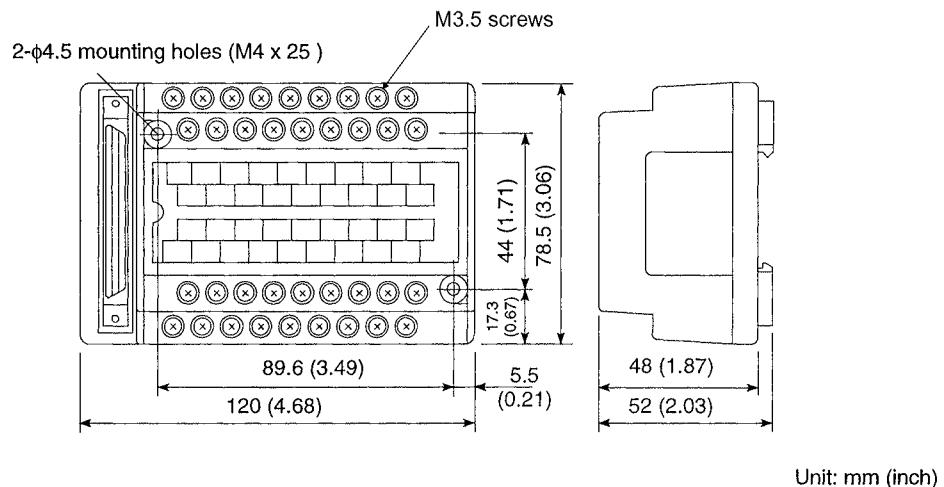

1.4.2 A1SG62 dummy module

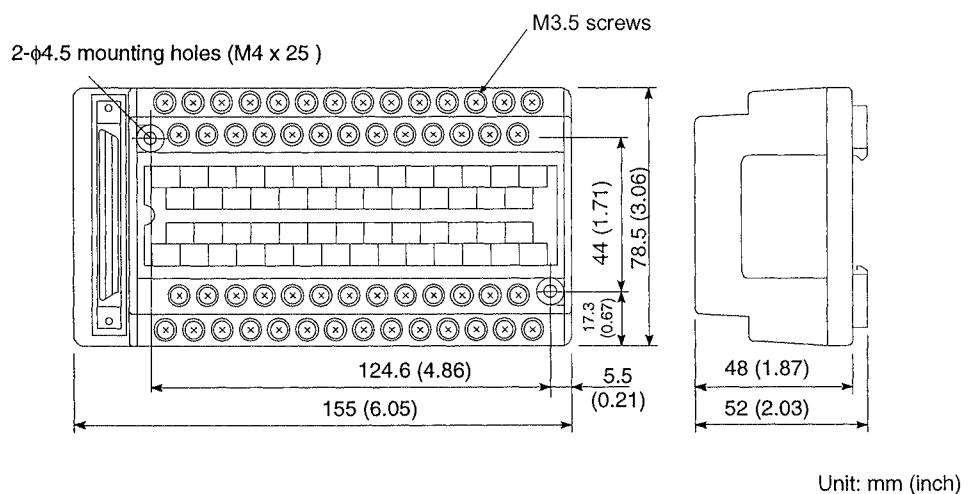

1.5 Connector/Terminal Block Convertor Modules

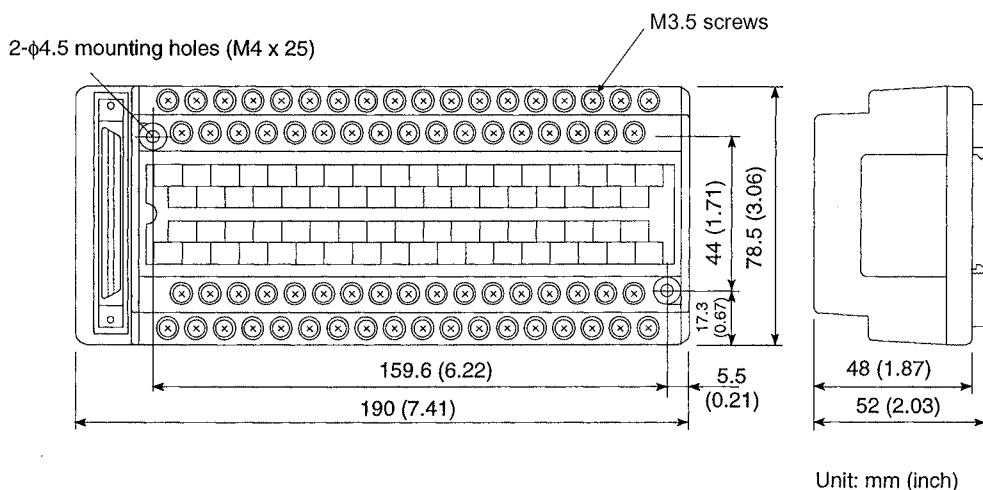

1.5.1 A6TB-36 type connector/terminal block convertor module

1.5.2 A6TB-54 type connector/terminal block convertor module

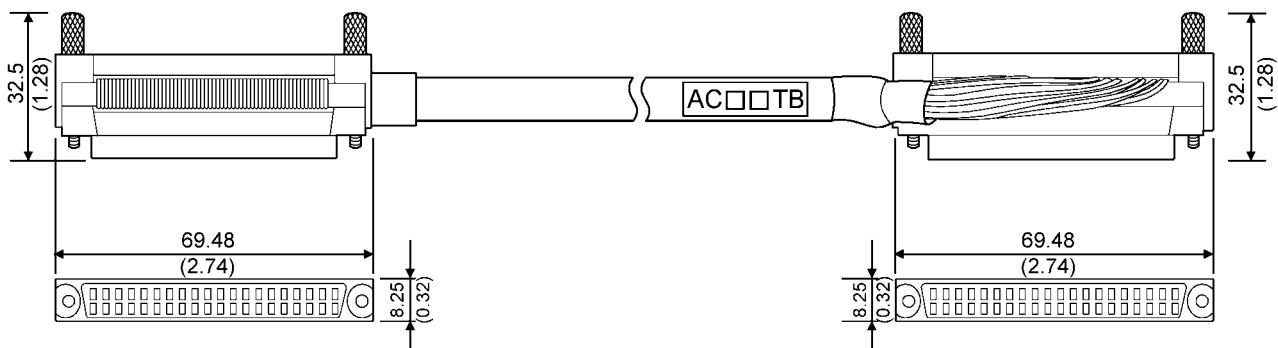

1.5.3 A6TBX70□ type connector/terminal block convertor module

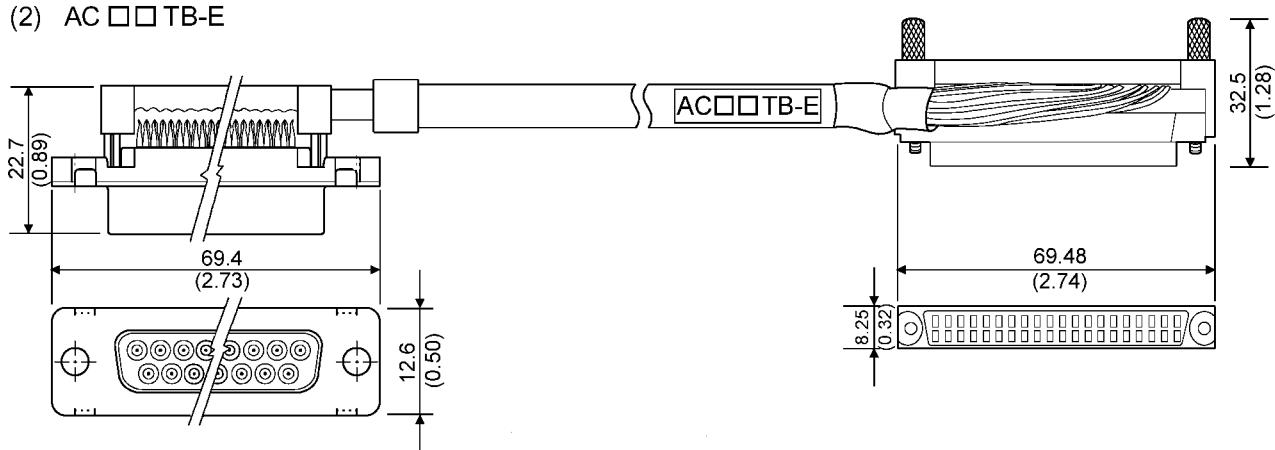

1.5.4 Connector/terminal block converter module cable

(1) AC □□ TB

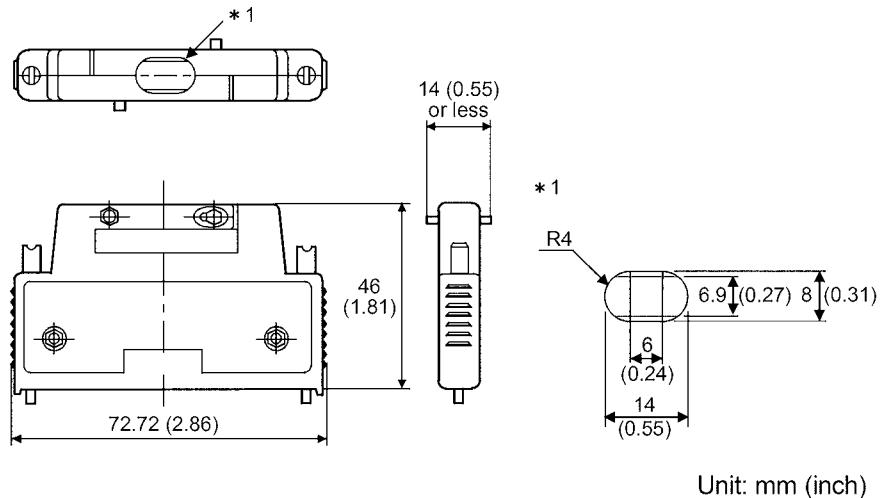

Unit: mm (inch)

(2) AC □□ TB-E

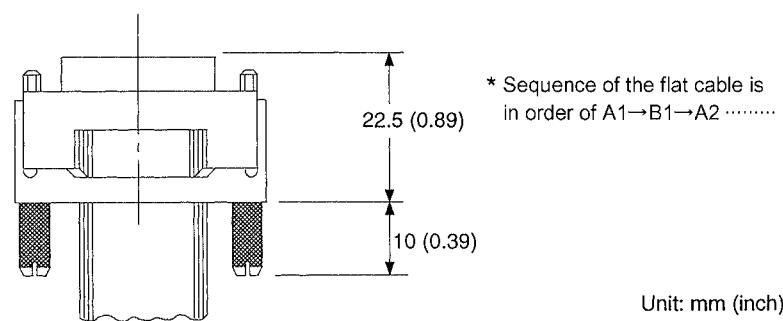

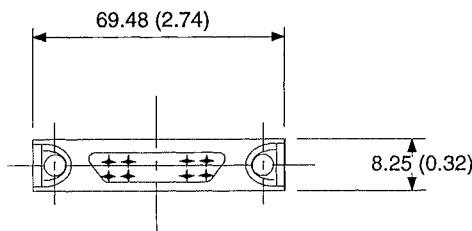

Unit: mm (inch)

1.6 40-Pin Connectors

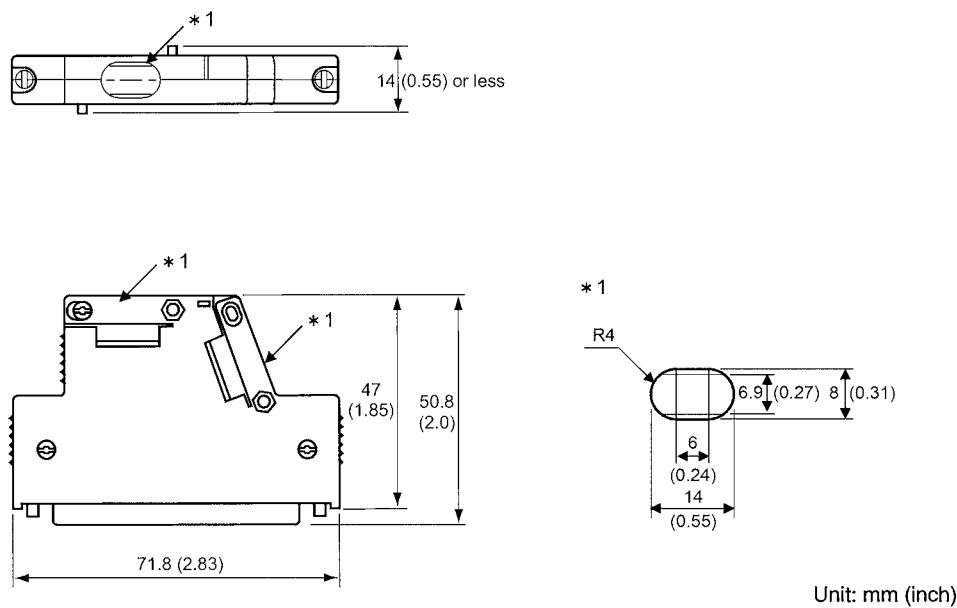

1.6.1 A6CON1 soldering-type 40-pin connector (straight out type),
A6CON2 crimp-contact-type 40-pin connector (straight out type)

Unit: mm (inch)

1.6.2 A6CON3 pressure-displacement-type 40-pin connector (flat cable type)

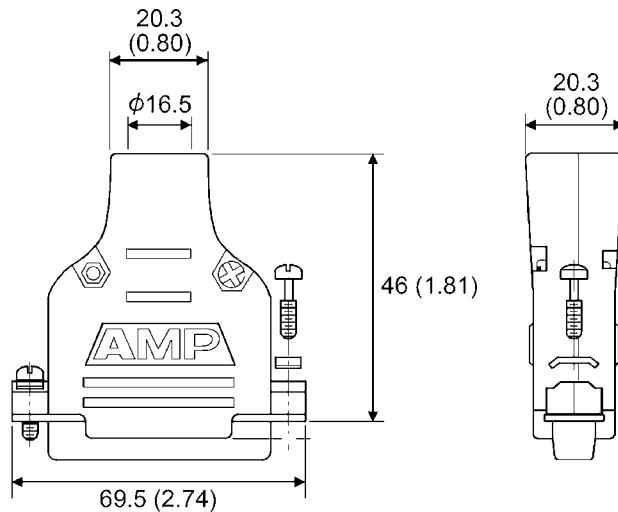

Unit: mm (inch)

1.6.3 A6CON4 soldering type 40-pin connector (straight/diagonal out type)

If the cable diameter is thinner than the clamp portion, wind tape, etc. to secure the cable so that it will not come off the cable clamp portion.
If the cable is made of slippery material, it is recommended to take anti-slip measures by winding rubber-based tape, etc.

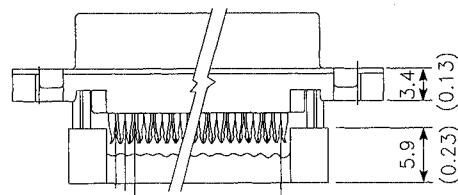

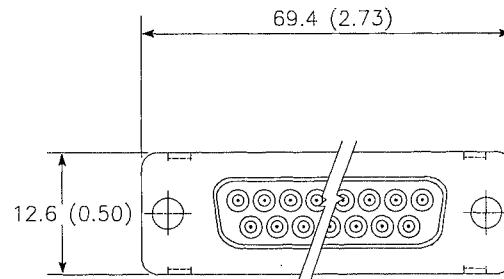

1.7 Pin D Sub-Connectors

- 1.7.1 A6CON1E soldering type 37-pin D sub-connector (straight out type)
A6CON2E crimp-contact-type 37-pin D sub-connector (straight out type)

Unit: mm (inch)

- 1.7.2 A6CON3E pressure-displacement-type 37-pin D sub-connector (flat cable type)

Unit: mm (inch)

MEMO

WARRANTY

Please confirm the following product warranty details before using this product.

1. Gratis Warranty Term and Gratis Warranty Range

If any faults or defects (hereinafter "Failure") found to be the responsibility of Mitsubishi occurs during use of the product within the gratis warranty term, the product shall be repaired at no cost via the sales representative or Mitsubishi Service Company.

However, if repairs are required onsite at domestic or overseas location, expenses to send an engineer will be solely at the customer's discretion. Mitsubishi shall not be held responsible for any re-commissioning, maintenance, or testing on-site that involves replacement of the failed module.

[Gratis Warranty Term]

The gratis warranty term of the product shall be for one year after the date of purchase or delivery to a designated place.

Note that after manufacture and shipment from Mitsubishi, the maximum distribution period shall be six (6) months, and the longest gratis warranty term after manufacturing shall be eighteen (18) months. The gratis warranty term of repair parts shall not exceed the gratis warranty term before repairs.

[Gratis Warranty Range]

- (1) The range shall be limited to normal use within the usage state, usage methods and usage environment, etc., which follow the conditions and precautions, etc., given in the instruction manual, user's manual and caution labels on the product.
- (2) Even within the gratis warranty term, repairs shall be charged for in the following cases.
 1. Failure occurring from inappropriate storage or handling, carelessness or negligence by the user. Failure caused by the user's hardware or software design.
 2. Failure caused by unapproved modifications, etc., to the product by the user.
 3. When the Mitsubishi product is assembled into a user's device, Failure that could have been avoided if functions or structures, judged as necessary in the legal safety measures the user's device is subject to or as necessary by industry standards, had been provided.
 4. Failure that could have been avoided if consumable parts (battery, backlight, fuse, etc.) designated in the instruction manual had been correctly serviced or replaced.
 5. Failure caused by external irresistible forces such as fires or abnormal voltages, and Failure caused by force majeure such as earthquakes, lightning, wind and water damage.
 6. Failure caused by reasons unpredictable by scientific technology standards at time of shipment from Mitsubishi.
 7. Any other failure found not to be the responsibility of Mitsubishi or that admitted not to be so by the user.

2. Onerous repair term after discontinuation of production

- (1) Mitsubishi shall accept onerous product repairs for seven (7) years after production of the product is discontinued. Discontinuation of production shall be notified with Mitsubishi Technical Bulletins, etc.
- (2) Product supply (including repair parts) is not available after production is discontinued.

3. Overseas service

Overseas, repairs shall be accepted by Mitsubishi's local overseas FA Center. Note that the repair conditions at each FA Center may differ.

4. Exclusion of loss in opportunity and secondary loss from warranty liability

Regardless of the gratis warranty term, Mitsubishi shall not be liable for compensation of damages caused by any cause found not to be the responsibility of Mitsubishi, loss in opportunity, lost profits incurred to the user by Failures of Mitsubishi products, special damages and secondary damages whether foreseeable or not, compensation for accidents, and compensation for damages to products other than Mitsubishi products, replacement by the user, maintenance of on-site equipment, start-up test run and other tasks.

5. Changes in product specifications

The specifications given in the catalogs, manuals or technical documents are subject to change without prior notice.

6. Product application

- (1) In using the Mitsubishi MELSEC programmable controller, the usage conditions shall be that the application will not lead to a major accident even if any problem or fault should occur in the programmable controller device, and that backup and fail-safe functions are systematically provided outside of the device for any problem or fault.
- (2) The Mitsubishi programmable controller has been designed and manufactured for applications in general industries, etc. Thus, applications in which the public could be affected such as in nuclear power plants and other power plants operated by respective power companies, and applications in which a special quality assurance system is required, such as for Railway companies or Public service purposes shall be excluded from the programmable controller applications.

In addition, applications in which human life or property that could be greatly affected, such as in aircraft, medical applications, incineration and fuel devices, manned transportation, equipment for recreation and amusement, and safety devices, shall also be excluded from the programmable controller range of applications.

However, in certain cases, some applications may be possible, providing the user consults their local Mitsubishi representative outlining the special requirements of the project, and providing that all parties concerned agree to the special circumstances, solely at the users discretion.
